This case, which has excited so much interest amongst both Chinese and foreigners, was brought to a somewhat singular conclusion before Mr Goodlake this morning. In his preface, Mr Helps says: "These notes, besides indicating that peculiar memory for persons and that recognition of personal attachment which have been very noticeable in our sovereigns llustrate, in a striking manner, the patriarchal feeling (if one may apply such a word as 'patriarchal' to a lady) which is so strong in the present opoupant of the throne. THE FRENCH MINISTER OF WAR. -Awriter in the Etendard tells the following interesting episode in the life of a captain of Engineers in the French army :- "One blazing hot day in 1837 the French troops were attacking Constantina at certain points indicated by Goneral Kohault de Fleury. The place was found to be much stronger than was believed; and efforts were redoubled, but they seemed to be in vain. The General anxiously followed the movements with his glass, when he saw a company of Sappers advancing, led by its captain, to another point, which his military knowledge had, in the midst of the action, revealed to him as the vulnerable spot. The attack there proved successful, and decided the fortunes of the day. The General sent next day for the officer, and said to him. "Captain, it was you who yesterday took of Chef de Bataillon for you." But the officer replied, "General, I am the youngest of my grade in the corps, and that promotion might give pain to some worthy men who are my seniors. I have not the cross : I should prefer the riband to the epaulette." "No matter," answered the General, somewhat brusquely; "the cross you will have sooner or later. VERY ALARMING .- We read in the New York Times:- "Apropos of the recent meteoric showers and the explosions of steam boilers in every part of the country, Professur Loomis suggests a very uncomfortable theory in regard to the safety of the earth itself. He thinks it not impossible that sufficient steam might be generated in the burning centre of the world to blow the whole of the globe to pieces. A volcanio eruption under the sea, or near it, like upon the central fires, to be followed, for aught we know, by an explosion that shall rend it apart, and send the fragments careering through space as small planets or meteors, each bearing off some distracted members of the human family, to make, perchauce, new discoveries and new acquaintance in other parts of the planetary aystem now revolving with us. So that the final catastrophe may, after all, be only a boiler explosion on a magnificent scale of grandeur and destruction.
